

Intensive Cultivation

The citizens of Japan do not have much land to use to grow crops. As a result, they must use intensive cultivation – they grow crops on every available piece of land. Draw a set of “blue prints” for your house including the land it is on that would show how you could use intensive cultivation, (much like the Japanese), in your own life. On the back of your blue prints, write one paragraph explaining where you would plant certain crops and how you would use intensive cultivation.
