

Let's put your new geography knowledge to the test. You are going to create a small version of your own world using the terms we just learned. On one side of a piece of paper, write a paragraph explaining your imaginary world using the terms we defined in class. The terms you must use are: ocean, continent, country, nation, state, county, and city.

On the back side of that paper, draw a simple version of your newly created world. (This isn't art class. It does not have to be perfect).

5 points
